7668903828 | vidhi2005ajmera@gmail.com | LinkedIn | Portfolio | GitHub

## EDUCATION

### GLA University

B.Tech in Computer Science (AI & ML), CGPA: 8.8

2022 – 2026

Mathura, India

### JP Public Academy

Senior Secondary (Class XII), Percentage: 87%

2022

### JP Public Academy

Secondary (Class X), Percentage: 88.6%

2020

## TECHNICAL SKILLS

**Programming Languages:** Java, Golang, Python, JavaScript, SQL

**Core CS Concepts:** DSA, Object-Oriented Programming, System Design, Operating Systems, Computer Networks

**Frameworks & Libraries:** Spring Boot, FastAPI, React, Node.js, Express.js

**Backend & APIs:** RESTful APIs, Microservices Architecture, API Design, Authentication & Authorization

**Databases:** MongoDB, MySQL, Vector Databases

**Cloud & DevOps:** AWS, Docker, Kubernetes, Jenkins, CI/CD Pipelines

**Tools & Technologies:** Apache Kafka, Git, GitHub Actions, Linux/Unix

## EXPERIENCE

### Guidewire Software

Jun 2026 – Present

Software Engineer Intern

- Working with the Cloud Common Services (CCS) team on cloud-native platform engineering and distributed systems development.
- Building and supporting scalable services using Golang, Docker, Kubernetes, and AWS cloud technologies.
- Contributing to containerized microservices, cloud infrastructure automation, deployment workflows, and platform reliability initiatives.

### HestaBit Technologies

Nov 2025 – May 2026

Associate Software Engineer

- Developed backend services for an Industrial IoT (IIoT) platform where wearable devices communicated through MQTT-based messaging pipelines for real-time data ingestion and processing.
- Built and maintained REST APIs and admin portal functionalities for device management, monitoring, analytics, and operational workflows.
- Integrated Apache Kafka for event-driven communication between device communication services and backend systems and implemented real-time monitoring using VictoriaMetrics for telemetry and performance tracking.
- Worked on Generative AI and LLM engineering projects, designing retrieval-augmented generation (RAG) pipelines, prompt workflows, and agent-based architectures.
- Built a multi-agent AI system inspired by OpenClaw-style autonomous workflows, enabling task planning, tool orchestration, context management, and multi-step execution across specialized agents.

### Goldman Sachs, Bangalore

May 2025 – Jul 2025

Software Engineering Intern

- Developed scalable backend services in Java, Spring Boot, and MongoDB for a production-grade enterprise system.
- Integrated Apache Kafka for event-driven communication across distributed services and streaming workflows.
- Built Angular-based interfaces to connect backend systems with user-facing analytical views.

### Meridian Solutions

Jan 2025 – May 2025

Backend Developer

- Built FastAPI backend services and REST APIs for a code plagiarism detection platform integrated with a React frontend.
- Implemented GPT-4o-mini based code similarity analysis and improved evaluation accuracy through prompt engineering.

## PROJECTS

---

### **Skillix – Job Portal | <https://jobbler-1.onrender.com/>**

- Built a scalable MERN-based job portal supporting concurrent access to job listings with optimized APIs and structured data models, i.e. User and Admin Panel.
- Implemented recruiter-applicant workflows and backend logic for managing application data and reporting-style transformations.

### **AjmeraPaints – E-commerce Website | <https://frontend-store-paints.vercel.app/>**

- Developed a full-stack e-commerce platform with authentication, cart management, order placement, and address handling.
- Integrated Razorpay payment gateway with data validation and reliable error handling across the checkout flow.

### **Secure Job – Career Guidance Platform | <https://securejob-rho.vercel.app/>**

- Built a full-stack platform designed to help students secure their first internship and placement opportunities through structured mentorship and career guidance programs.
- Implemented Razorpay payment gateway integration with secure transaction handling, supporting multiple purchase flows including recorded learning sessions and personalized 1-on-1 mentorship calls.
- Developed authentication, session booking workflows, payment verification, and responsive user interfaces to streamline the student onboarding experience.

## ACHIEVEMENTS & CERTIFICATIONS

---

Solved **700+** DSA problems on LeetCode, GeeksforGeeks, CodeChef, and Codeforces.

Ranked **17th overall** in **GSSoC'25** with 90+ PRs merged across multiple open-source projects.

Participated in IIT Roorkee E-Summit 2025 Hackathon .

Certified in Full-Stack Development (MERN), GenAI.
