Education

B.Tech Computer Science (AIML & IoT)

GLA University, Mathura

Expected Graduation: 2027

CPI: 8.85 / 10

Class XII (ISC Board)

St. Peter's College, Agra

2023

Percentage: 91%

Skills

Programming & Querying: Java, Python, JavaScript, HTML, CSS, SQL

CS Fundamentals: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

Machine Learning & AI: Machine Learning, Deep Learning, Neural Networks, Natural Language Processing

Libraries & Frameworks: React.js, Express.js

Runtime Environment: Node.js

Cloud: Microsoft Azure (VMs, App Service, Azure Functions, AKS, SQL Database, VNet, AAD)

Databases: MongoDB, PostgreSQL

Version Control: Git, GitHub

Experience

Trainee

May 2024 – Jul 2024

Intel Unnati Industrial Training Program (Remote)

- Developed “**HealthHive**,” a **health data management project**, simulating real-world health datasets to design, test, and validate project workflows.
- Gained **hands-on experience across the full project development lifecycle**, including data generation, cleaning, and process optimization.
- Enhanced skills in **data handling, analysis, and project simulation**, preparing the system for scalable and real-time applications.

Projects

VyaparAI – AI-Powered WhatsApp Business Assistant

Feb 2026 – Present

Tech: Python, FastAPI, React, NLP, Supabase, WhatsApp Cloud API, Razorpay

- Developing a **multilingual AI chatbot** that automates **WhatsApp customer interactions** for small businesses by detecting language (Hindi, Urdu, English) and classifying intents such as **product inquiries, orders, and delivery requests**.
- Building **scalable backend APIs** using FastAPI and **NLP models** to process messages and generate **automated responses**.
- Integrating **WhatsApp Cloud API** and **Razorpay** to enable real-time messaging, order management, and in-chat payment processing.
- **Independently designing and developing the complete system**, including a responsive React dashboard for business owners to manage products, monitor conversations, track orders, and view sales analytics.

AutoLevel AI – AI-Powered Procedural Game Level Generator

Sep 2025 – Oct 2025

Tech: Python, Node.js, Unity, TensorFlow, MongoDB

- Developed an **AI-powered procedural game level generation system** using **deep learning and procedural algorithms** to automatically create dynamic game environments, significantly reducing manual level design effort.
- Implemented **story-driven level generation and adaptive difficulty scaling**, enabling intelligent level progression and seamless **integration with Unity game engine**.
- Designed and built the **backend architecture**, including **REST APIs and database schemas**, using **Python and Node.js** to support ML model integration and real-time communication with the game engine.

Awards & Certifications

- **HackerRank SQL – 3-Star Silver Badge:** Ranked in top percentile globally, demonstrating advanced SQL mastery.
- **LeetCode – 890+ Problems Solved:** Strengthened algorithmic and data structure expertise across easy, medium, and hard challenges.
