EDUCATION

GLA University
Bachelor of Technology in Computer Science (AI & Machine Learning)

Mathura, Uttar Pradesh, India
July 2024 – August 2028

TECHNICAL SKILLS

Cloud & DevOps: AWS, Azure
Programming Languages: Python, Java, C
Backend Development: Python (FastAPI, Flask), REST APIs
Artificial Intelligence: Generative AI, AI Agents
Databases: MongoDB, Postgresql
Version Control: Git
Operating Systems: Linux

CERTIFICATIONS

[Microsoft Certified: Azure Fundamentals](#)
AZ900 - Knowledge of Cloud services provided by Azure Cloud.

January 2025

[Microsoft Certified: Azure AI Fundamentals](#)
AI900 – Knowledge of Artificial Intelligence workloads and considerations on Microsoft Azure.

December 2025

EXPERIENCE

Summer Intern
SkillCred Innovations Pvt Ltd.

May 2025 – August 2025
4 Months (Remote)

- Developed and fine-tuned applications using **Large Language Models (LLMs)** for real-world use cases such as text generation, summarization, and Q&A systems
- Worked with the Hugging Face ecosystem, leveraging **Transformers, datasets, and pretrained models** for rapid prototyping
- Integrated Generative AI APIs into applications, enabling intelligent automation and conversational interfaces

PROJECTS

[Textile Pattern Prediction](#) | Python, Generative AI (Google Places API), Fast API

- Built an AI-powered textile defect detection system using EfficientNetB0 and OpenCV for accurate fabric quality inspection
- Developed Flask-based REST APIs for real-time image processing and defect classification
- Designed responsive React dashboards with Firebase Authentication for user management and scan analytics
- Integrated Firebase Firestore and Storage for secure cloud-based data and image management

[Sentiment Analysis](#) | Python, Generative AI(Perplexity), Fast API

- Designed and implemented an NLP pipeline to analyze and classify user sentiment from raw text inputs
- Applied text preprocessing techniques (tokenization, cleaning, vectorization) to improve model accuracy
- Enabled real-time sentiment detection with optimized response handling for interactive usage
- Built a lightweight inference system capable of handling multiple concurrent text requests

[PDF Semantic Search](#) | JavaScript, Hugging Face Transformers, FAISS, PDF.js, Netlify

- Built a browser-based PDF Semantic Search & RAG system using Hugging Face Transformers and FAISS
- Implemented semantic search, vector similarity matching, and AI-generated responses for PDF documents
- Developed a responsive UI with contextual retrieval, highlighted matches, and expandable search results
- Deployed a fully serverless, Netlify-ready application with complete in-browser AI processing

[Clothing Recommendation System](#) | Python, Gradio Framework, Generative AI(Gemini), ML

- Developed an AI-based recommendation engine that suggests clothing items based on user preferences and style
- Implemented feature extraction and similarity-based matching to generate personalized outfit recommendation
