PROJECTS

Multi Factor Attendance Tracking system <https://github.com/vin6819/altair> Oct 2024 – Nov 2024

Developed a web and mobile application to streamline attendance tracking using multiple factors such as QR code scanning, face recognition, and GPS location verification.

Technologies Used: Flask, MongoDB, Android Studio, QR Code, GPS, Face Recognition (Face API JS), HTML, CSS, JavaScript, React-Native

- **Designed** a mobile app using **React-Native** with a login feature enabling QR code scanning to initiate attendance validation
- **Implemented** a facial recognition system leveraging pre-trained models from **Face API JS** and integrated it with the database for real-time attendance logging.
- **Integrated** a **MongoDB Atlas** database to store user details, images, and location data, ensuring efficient data retrieval and scalability.
- **Optimized** location-fetching services using **expo-location** for accurate GPS verification and seamless attendance updates.

DevJourney – A coding platform <https://www.dev-journey.tech/> Dec 2024 – Feb 2025

GitHub Repo: <https://github.com/NGDEC03/DevJourney/>

Collaborated in a team of two to design and develop a full-stack coding platform where users can practice coding problems, submit solutions, and track progress.

Technologies Used: Next.js, ShadCN, Prisma, MongoDB

- Created the UI using ShadCN components.
- Created APIs to interact with MongoDB Atlas database
- Integrated the APIs with the front-end components
