EDUCATION

B.Tech Computer Science (Artificial Intelligence & Machine Learning) **2024 - 2028**

GLA University, Mathura , CPI : 9.21

Intermediate (CBSE) **2023 - 2024**

M.P.S.Mgrace conventsr. sec. school Mathura,Percentage : 90.83%

High School (CBSE) **2021 - 2022**

M.P.S.Mgraceconvent sr. sec. school Mathura, Percentage : 92.83%

Work Experience

IoT & AIML Engineer, Sunrise Instruments

May 2026 - June 2026

- Architected a LoRa mesh network topology over the MNIT jaipur campus, writing custom software to interface directly with and manage real-time physical hardware nodes.
- Built a RAG-based AI system that queries network telemetry databases, allowing administrators to automate network control and optimization via natural language commands.

TECHNICAL SKILLS

Programming Languages: Python, JAVA, C, HTML, CSS, JS

Libraries/Frameworks: scikit-learn, pandas, numpy, Flask, matplotlib, seaborn, Django Framework

Tools & Platforms: Git, Git Hub, VS Code, Azure portal, Power BI

Databases: MySQL, ORM

Others: IoT, LoRa Network, Cloud,Docker & K8s(Basics), Object-Oriented Programming(python)

Soft Skills: Communication, Leadership, Collaboration, Innovator, Pragmatic

PROJECTS

Research Buddy

- Architected a multi-agent AI pipeline in Python using LangGraph, upgrading from a standard tool-calling chain to a highly deterministic, Supervisor-led Directed Acyclic Graph (DAG).
- Engineered a hub-and-spoke orchestration model, using custom Python conditional edges to dynamically evaluate state and route tasks to isolated worker nodes (Researcher, Outliner, Drafter).
- Eliminated LLM hallucinations and context-window crashes by replacing JSON tool arguments with a strictly enforced, Python-managed TypedDict memory for handling massive data payloads.
- Integrated web-scraping APIs natively into Python nodes, removing heavy LangChain agent wrappers to guarantee zero data-loss and rapid, programmatic data ingestion.

Dhruvishya Iot Based Car

- TinyML Deployment:ARM Cortex-M4 optimized road classification with low latency.
- Vibration Analysis: Real-time Edge ML categorization of Smooth, Rough, and Too Rough surfaces.
- Adaptive Control: Dynamic speed adjustment via smart sensing for visionbased systems.

ExpoBot

- An intelligent autonomous guiding robot developed to redefine how visitors experience exhibitions.
- AI-Powered Vision: Real-time person detection and automated greeting sequences.
- Voice & Web Control: Voice-command interaction routed through a custom web interface.
- Autonomous Navigation: Precision project guidance and motion control.
- Interactive Orchestration: Real-time, non-blocking audio explanations for dynamic user engagement.

EXTRACURRICULAR

- **Certifications:** Microsoft Azure Fundamentals, Microsoft Azure AI Fundamentals, Machine Learning Specialization (by Coursera | Stanford Online | Deeplearning.AI), Version Control (by Coursera | Meta), Postman API Fundamentals Student Expert (by Postman)
- **Venturethon 2025 Silver Medalist:** Secured 2nd place with Team Anveshan at GLA University's innovation challenge. AUV Development: Co-pitched an ML-powered Autonomous Underwater Vehicle for automated subsea inspection.
